

Question Number	Answer	Additional guidance	Mark
1 (a)	The only correct answer is C polysaccharide <i>A is incorrect because starch and cellulose are not phospholipids</i> <i>B is incorrect because starch and cellulose are not polypeptides</i> <i>D is incorrect because starch and cellulose are not triglycerides</i>		(1)

Question Number	Answer	Additional guidance	Mark
1 (b)	The only correct answer is A amyloplast <i>B is incorrect because starch is not stored in a mitochondrion</i> <i>C is incorrect because starch is not stored in a tonoplast</i> <i>D is incorrect because starch is not stored in a vacuole</i>		(1)

Question Number	Answer	Additional guidance	Mark
1(c)	An answer that makes reference to three of the following: Similarity • both {polymers / polysaccharides} containing (1,4) glycosidic bonds (1) • both consist of glucose (1) and max two differences: • cellulose contains β-glucose (molecules) whereas starch contains α-glucose (molecules) (1) • cellulose contains 1,4 (glycosidic bonds) whereas {starch / amylopectin} contains 1,4 and 1,6 (glycosidic bonds) (1) • cellulose is linear (molecule) whereas {starch / amylopectin} contains branches (1)	Full marks can only be awarded if there is a similarity in the answer. Do not piece together. Accept cellulose is unbranched whereas {starch / amylopectin} is branched	(3)
