

- 25** The diagram shows the outline of a xerophytic leaf that had been left for 45 minutes in different conditions, P and Q.

Which statements about the cells in layer Y of the leaf in each of the conditions P and Q **after** 45 minutes are correct?

- 1 There is a less negative water potential in P than in Q.
- 2 The cells may be turgid in P and plasmolysed in Q.
- 3 The cells are less turgid in P than in Q.
- 4 There is no net diffusion of water into Y in either P or Q.

A 1, 2 and 4 **B** 1, 3 and 4 **C** 1 and 3 only **D** 2 and 4 only
