

Question	Marking Guidance	Mark	Comments
04.1	Nucleus;	1 (1 x AO1)	

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

04.2	1. Loops (of DNA) contain introns; 2. DNA forming hybrid (molecule) contain exons; 3. Complementary base pairing occurs between DNA and mRNA OR Hydrogen bonding occurs between DNA and mRNA; 4. Introns removed during splicing OR Introns removed to produce mRNA; 5. (The) mRNA is shorter (than original DNA/pre-mRNA strand) due to splicing;	3 max (3 x AO3)	1. Accept 'non-coding' for introns, but only for mark point 1.
-------------	--	-----------------------	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

04.3	1. No loops (of DNA); 2. (Because) no introns (in prokaryotic DNA);	2 (2 x AO2)	
-------------	--	-------------------	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

04.4	Change in base sequence (of exons) occurs OR Deletion/addition of bases occurs OR Deletion of exons;	1 (1 x AO1)	Accept description of exons. Accept nucleotide/s for base/s. Ignore references to DNA or RNA.
