

5(a)	<i>any two from</i> cell wall made from, peptidoglycan / murein ; A not cellulose DNA free in the cytoplasm ; or circular / closed loop, of DNA ; or naked DNA / no histones ; 70s ribosomes ; AVP ; e.g. no membrane around flagellum or flagellum is <u>not</u> 9+2 (microtubule pattern) ;	2
5(b)	<i>any two from</i> transport of sucrose / assimilates / products of photosynthesis (in phloem), is prevented / AW ; <i>ref.</i> starch synthesised in root from transported assimilates / AW ; starch not converted in leaf to sugars / sucrose, (for transport) ; idea that pathogen and phloem present in, all organs / many organs / leaves / roots ; AVP ; e.g. reason(s) why it cannot be xylem	2

Question	Answer				Marks
5(c)	feature	DNA nucleotide with adenine	RNA nucleotide with adenine	ATP	5
	contains nitrogen (yes or no)	yes	yes	yes ;	
	contains a pyrimidine base (yes or no)	no	no	no ;	
	number of phosphate groups	1	1	3 ;	
	name of the sugar component	deoxyribose ;	ribose	ribose ;
