

- 2 A cell is shown in the micrograph.

Which statement explains how it is possible to identify the type of microscope used to produce the micrograph?

- A** The nucleus is visible, so an electron microscope was used.
- B** The endoplasmic reticulum is **not** visible, so a light microscope was used.
- C** Chloroplasts are visible, so a light microscope was used.
- D** Ribosomes are visible, so an electron microscope was used.
