

Question	Marking Guidance	Mark	Comments
08.1	1. Name of solution/independent variable in first column; 2. Same number of decimal places in final/column on right OR 1.3 not 1.29 OR 0.72 not 0.7;	2	Ignore headings lack detail Ignore units required Ignore percentage change required 2. Accept same degree of precision

Question	Marking Guidance	Mark	Comments
08.2	1. (Warmer water/water at 30 ° C) has more kinetic energy; 2. More/quicker osmosis OR Large(r) difference in mass (in time available);	2	

Question	Marking Guidance	Mark	Comments
08.3	(No) 1. Egg mass increased; 2. Water moves in by osmosis; 3. (So) egg water potential lower (than vinegar water potential) OR Vinegar water potential higher (than egg water potential);	3	3. Accept ψ /WP for water potential 3. Accept less negative for "higher" OR "more negative" for lower

Question	Marking Guidance	Mark	Comments
08.4	Independent variable 1. Concentration of (sugar) solution; Determining water potential 2. Plot calibration curve OR Graph of ratio against concentration (of sugar); 3. Interpolate from ratio of 1; 4. Change concentration into water potential;	4	1. Accept water potential/dilution for "concentration" 2. Ignore unqualified "plot graph" 3. Accept description of interpolation 4. Accept for example, descriptions using a table/graph to find water potential
