

- 7 A naturally occurring polysaccharide synthesised in a plant is a branched chain of α -glucose.

The straight parts of the molecule are linked by α -1,6 glycosidic bonds with only a small number of branches which are linked by either an α -1,3 glycosidic bond or an α -1,4 glycosidic bond.

Which polysaccharide has a structure **most** similar to that described?

- A amylopectin
- B amylose
- C cellulose
- D glycogen
