

2(a)(i)	any two from: to kill any remaining, weevils / insects ; <i>In context of treatment 3 compared to treatment 1:</i> to assess effect on scars / petiole length, caused by insecticide / AW ; <i>In context of treatment 3 compared to treatments 4,5,6:</i> to assess effect on scars / petiole length, caused by (added) weevils ;	2
2(a)(ii)	<i>treatment 2</i> to see if effect on scars / petiole length, is caused by (added) weevils ; <i>treatments 4, 5 and 6</i> to see how long the insecticide lasts ;	2
2(a)(iii)	shows, spread of data around the mean / variation in the results about the mean ; any one from: overlapping shows that there may be / is, no significant difference between the means ; no overlap shows that there may be a significant difference between means ;	2
2(a)(iv)	any one from: 1 treatments have little / no effect on the petiole length ; 2 treatments / insecticides reduce the number of the <u>scars</u> ; 3 weevils (only) cause scars when no insecticide is used / AW ; 4 insecticide kills weevils ; 5 insecticide remains effective for (at least) 3 weeks ;	1

Question	Answer	Marks
2(b)(i)	Use of formula $\frac{a-b}{b} \times 100$; (increases by) <u>178</u> ;	2
2(b)(ii)	<i>any one from:</i> data has a normal distribution ; comparing (two) means ; continuous data ;	1
2(b)(iii)	<i>any one from:</i> number of plants sampled before and after treatment ; number of plants sprayed and not sprayed ; number of plants sampled, in each / both groups / experiments ;	1
