

2 The diagram shows an image of a cell with a scale bar.

The scale bar (Z) represents an actual size of $15\text{ }\mu\text{m}$.

Distance Y represents the diameter of the cell image.

Which calculation to find the actual diameter of the cell is correct?

A $15 \times (Y + Z)$

B $Y \times \left(\frac{Z}{15}\right)$

C $\left(\frac{Y}{Z}\right) \times 15$

D $\left(\frac{Y}{15}\right)$
