

- 70** The graph shows how a number of factors vary with the distance down a river, after a source of pollution flowed in.

(Assume the oxygen concentration is changing only based on the species present in the river.)

Which one of the statements below can be correctly concluded from the graph?

- A** At point 1, the oxygen concentration is decreasing because of increased anaerobic respiration.
- B** At point 2, the oxygen concentration is decreasing because high numbers of algae are photosynthesising.
- C** At point 3, the oxygen concentration is decreasing because bacteria are using up more oxygen than the algae are producing.
- D** At point 4, the number of bloodworms and sludgeworms will be lowest because they lack oxygen.
- E** At point 5, fish numbers increase because there is less competition with algae for oxygen.
