

1(a)	<table><tr><th>stage of respiration</th><th>letter</th></tr><tr><td>glycolysis</td><td>B</td></tr><tr><td>link reaction</td><td>D</td></tr><tr><td>Krebs cycle</td><td>D</td></tr><tr><td>oxidative phosphorylation</td><td>C</td></tr></table> ;;; 3 marks if all four letters are correct 2 marks if three letters are correct 1 mark if one or two letters are correct	stage of respiration	letter	glycolysis	B	link reaction	D	Krebs cycle	D	oxidative phosphorylation	C	3
stage of respiration	letter											
glycolysis	B											
link reaction	D											
Krebs cycle	D											
oxidative phosphorylation	C											
1(b)	any four from: 1 oxygen is the, <u>final</u> / <u>last</u> / <u>terminal</u>, electron acceptor ; 2 electron transport chain / ETC, stops ; 3 less / no, protons / H⁺ / hydrogen ions, move, into intermembrane space / across inner mitochondrial membrane ; 4 less / no, proton / electrochemical, gradient ; 5 less / no, protons move through ATP synthase ; 6 less / no, recycling / regeneration, of, NAD / FAD ;	4										
1(c)	any three from: 1 <u>lactate</u> dehydrogenase ; 2 less / no, pyruvate → lactate ; 3 (so) less / no, NAD, regenerated / recycled ; 4 (so) less / no, triose phosphate / TP, → pyruvate ; 5 (so) less / no, ATP from substrate, linked / level, reactions / phosphorylation (in glycolysis) ;	3
