

2 (a) Negative feedback is important in maintaining homeostasis.

Control of the ventilation rate is an example of negative feedback.

The diagram summarises negative feedback.

- (i) Which row of the table shows the sensor and the location of the sensor involved in the control of ventilation?

(1)

	sensor	location of sensor
☐ A	baroreceptor	hypothalamus
☐ B	baroreceptor	medulla oblongata
☐ C	chemoreceptor	hypothalamus
☐ D	chemoreceptor	medulla oblongata

- (ii) Explain why the control of ventilation rate is an example of negative feedback. Use the information in the diagram to support your answer.

(4)

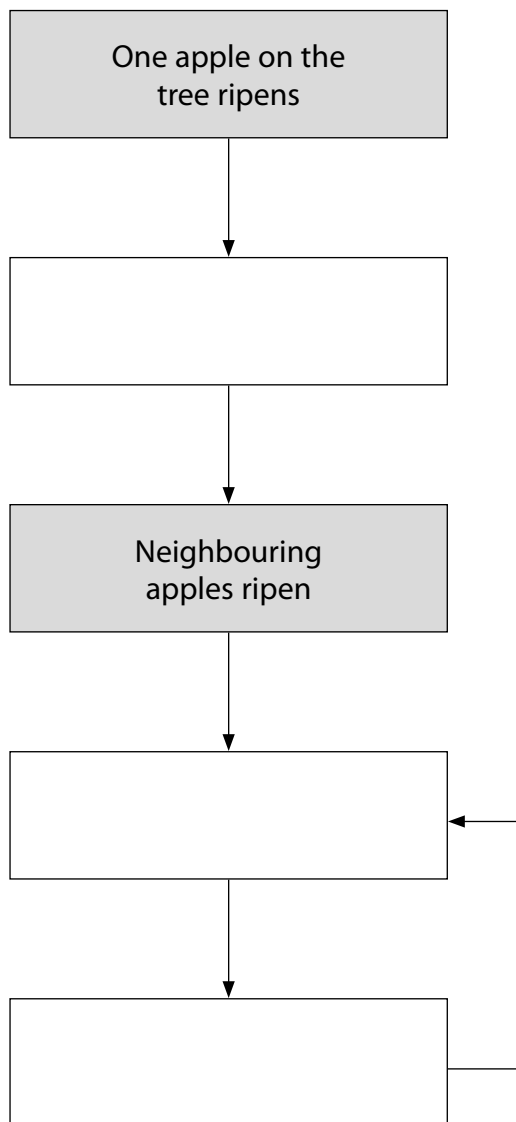

[illegible]

(b) The ripening of apples is an example of positive feedback.

Ethene is a gas that causes apples to ripen. Ripe apples release ethene.

Complete the diagram to show positive feedback in the ripening of apples.

(3)
