

5 Which statements about mitochondria, chloroplasts or prokaryotes are correct?

- 1 Mitochondria and chloroplasts have a fully permeable inner membrane and a partially permeable outer membrane.
- 2 Prokaryotes and chloroplasts have 70S ribosomes that are the sites for translation and polypeptide synthesis.
- 3 Prokaryotes and mitochondria have an outer membrane and an inner, folded membrane where ATP synthesis occurs.
- 4 Prokaryotes and mitochondria have circular DNA where genes coding for information are located.

A 1, 2 and 3 **B** 1, 2 and 4 **C** 1 and 3 only **D** 2 and 4 only
