

- 19 The diagram shows the measurements of agar blocks P, Q and R that contained dilute acid.

The agar blocks were placed into a pH indicator solution that diffused into the blocks. The agar changed colour when the indicator solution came into contact with the acid.

What is the correct order for the complete colour change of the agar blocks?

	fastest	→	slowest
A	P	Q	R
B	P	R	Q
C	Q	R	P
D	R	P	Q
