

Question	Marking Guidance	Mark	Comments
05.1	1. <i>E. rufus</i> in north (west) OR <i>E. rufus</i> in the west OR <i>E. rufus</i> above river; 2. <i>E. rufifrons</i> in south OR <i>E. rufifrons</i> in west and east OR <i>E. rufifrons</i> below river; 3. (Actual) distribution similar to expected (distribution) OR (Actual) distribution similar to environmental needs OR (Actual) distribution (slightly) less than expected distribution;	3 (3 x AO3)	1 and 2. Accept equivalent valid statements e.g., for 1, no <i>E. rufus</i> in south. 1 and 2. If neither mark is awarded, accept, for one mark, 'they are separated by the river' OR 'there is no overlap in their distribution/ranges'. 1 and 2. Accept converse. 1 and 2. Do not penalise 'prefer'. 3. Accept for one or both species.

Question	Marking Guidance	Mark	Comments
05.2	1. Geographical isolation OR Allopatric speciation; 2. Reproductive separation/isolation OR No gene flow OR Gene pools separate; 3. Different selection pressures OR	5 max (3 x AO1, 2 x AO2)	1. Ignore descriptions of geographical isolation. 1. Reject sympatric. Ignore reference to two species at start. 2. Reproductive isolation must be at beginning of process. 2. Accept no interbreeding but must be a separate idea from mp 6 which relates to definition of a species.

	Different environmental/abiotic conditions/factors; 4. (Variation due to) mutation(s) (in different populations); 5. (Different/advantageous) <u>allele/s</u> passed on/selected OR Change in frequency of <u>allele/s</u>; 6. (Eventually different species) cannot (inter)breed to produce fertile offspring;		2. Reject no inbreeding.

Question	Marking Guidance	Mark	Comments
05.3	(Marking) does not affect survival/predation/recapture;	1 (AO3)	Accept. Mark does not rub/wash off/is non- toxic. Ignore 'does not harm' on its own unless it relates to survival/predation/recapture.
Question	Marking Guidance	Mark	Comments
05.4	3;	1 (AO2)	Ignore any wording provided e.g. lemurs.
