

8 The diagrams represent two monosaccharides with the same molecular formula ($C_6H_{12}O_6$).

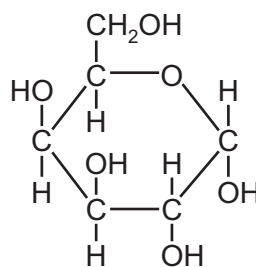

Both can exist in an alpha (α) or beta (β) form as shown.

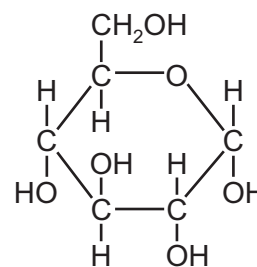

β -galactose

β -glucose

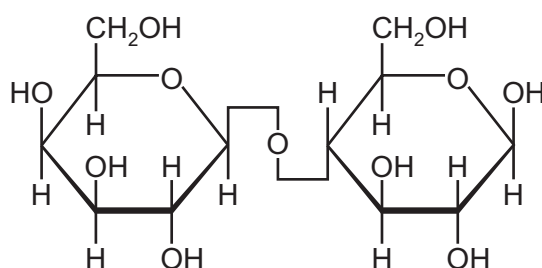

α -galactose

α -glucose

The diagram shows a lactose molecule formed by condensation between glucose and galactose.

Which molecules have condensed to form lactose?

- A α -glucose and α -galactose
- B α -glucose and β -galactose
- C β -glucose and α -galactose
- D β -glucose and β -galactose
