

6(a)(i)	D ;	1
6(a)(ii)	D and C ;	1
6(b)	<i>any three from:</i> 1 site of, link reaction / Krebs cycle ; 2 DNA / ribosomes, for production of proteins (used in respiration) ; 3 named example ; e.g. enzymes / coenzymes / electron carriers ; 4 production of, reduced FAD / reduced NAD, for oxidative phosphorylation ; 5 substrate-linked phosphorylation ;	3

Question	Answer	Marks
6(c)	any four from: <i>process, stops / decreases, because:</i> 1 no / fewer, electrons accepted by oxygen or oxygen is the final electron acceptor ; 2 no / fewer, electrons, enter / move along, electron transport chain / ETC or ETC stops ; 3 no / fewer, H⁺ pumped into intermembrane space or no / less steep, proton gradient ; 4 no / less, chemiosmosis ; 5 reduced NAD / reduced FAD, not oxidised / or NAD / FAD, not recycled ; 6 no / less, ATP produced ; 7 AVP ; e.g. no / less, pyruvate enters mitochondrion.	4
