

Question	Marking guidance	Mark	Comments
10.1	1. Person (infected with HIV) has HIV DNA (in their DNA); 2. New HIV (particles) still made; 3. (AZT) inhibits reverse transcriptase; 4. (AZT) stops these (new HIV particles) from forming new HIV DNA; OR 5. Slows / stops replication of HIV; 5. Stops destruction of more / newly infected T cells; 6. So immune system continues to work (and AIDS does not develop);	4 max	4. Context is important 4. Allow slows / stops (re)production of HIV 4. Reject (AZT) prevents DNA replication
10.2	1. Slows / stops the development of AIDS; 2. Because HIV resistant to AZT is damaged / destroyed / prevented from replicating (by other drugs); OR 3. AZT continues to work as a drug; 4. Because HAART prevents the spread of AZT-resistant HIV to rest of the human population; OR 5. No new HIV particles made; 6. Because HAART might interfere with viral protein synthesis;	4 max	Mark in pairs. Do not mix and match. 2. Neutral HIV killed 2. Accept other drugs prevent HIV resistant to AZT from infecting new / more cells 6. Accept blocks transcription / translation / synthesis of lipid envelope / aspect of viral structure
10.3	1. (Fewer mitochondria so) less (aerobic) respiration; 2. (Muscles receive) less ATP (so waste);	2	1. Ignore no respiration 2. Reject less energy produced 2. Ignore no ATP is made
