

Question	Marking Guidance	Mark	Comments
04.1	Deoxyribose;	1	
04.2	1. Thymine 18 (%); 2. Guanine 32 (%);	2	
04.3	DNA polymerase;	1	
04.4	1. (Figure 4 shows) DNA has antiparallel strands/described; 2. (Figure 4 shows) shape of the nucleotides is different/nucleotides aligned differently; 3. Enzymes have active sites with specific shape; 4. Only substrates with complementary shape/only the 3' end can bind with active site of enzyme/active site of DNA polymerase;	4
