

number		
1(a)	The only correct answer is A <i>B is incorrect because the only elements present in all amino acids are carbon, hydrogen, oxygen and nitrogen</i> <i>C is incorrect because the only elements present in all amino acids are carbon, hydrogen, oxygen and nitrogen</i> <i>D is incorrect because the only elements present in all amino acids are carbon, hydrogen, oxygen and nitrogen</i>	(1)

Question number	Answer	Mark
1(b)	The only correct answer is C <i>A is incorrect because amino acids are not held together by ester bonds</i> <i>B is incorrect because amino acids are not held together by ester bonds</i> <i>D is incorrect because hydrolysis breaks bonds not forms them</i>	(1)

number			
1(c)	A description that makes reference to three of the following points: • (chain) becomes {secondary structure / alpha-helix / (beta) pleated sheet (1)} • (secondary structure) becomes {tertiary / quaternary / 3D / globular} structure (1) • with an active site (1) • with hydrophilic <u>R groups</u> arranged on the outside OR credit named bond between the <u>R groups</u> for either secondary or tertiary structure (1)	e.g. hydrogen bonds (only) for secondary structure hydrogen bonds / disulfide {bridges / bonds} / ionic bonds / hydrophobic interactions for tertiary DO NOT ACCEPT if wrongly named bonds are given	(3)
