

24 Which statement about the lagging strand in DNA replication is correct?

- A** DNA ligase catalyses the formation of phosphodiester bonds between short DNA fragments.
- B** DNA ligase catalyses the formation of hydrogen bonds between nucleotides.
- C** DNA polymerase adds nucleotides to the lagging strand in a 3' to 5' direction.
- D** DNA polymerase adds nucleotides to the lagging strand in a 5' to 3' direction continuously.
