

7 (a) Structures and compounds involved in respiration in anaerobic conditions include:

A – pyruvate

F – NAD

B – reduced NAD

G – ethanal

C – ethanol

H – lactate

D – carbon dioxide

I – oxygen

E – cytoplasm

J – mitochondrion

Complete Table 7.1 by matching each description with **one** letter chosen from **A** to **J** to show the correct structure or compound.

You may use each letter once, more than once or not at all.

Table 7.1

description	letter
end product of glycolysis	
cellular location of respiration in anaerobic conditions	
end product of respiration in anaerobic conditions in yeast cells	
compound used to reduce pyruvate	
end product of respiration in anaerobic conditions in muscle cells	
gas released during alcoholic fermentation	

[6]

(b) Respiration in anaerobic conditions in muscle cells during vigorous exercise can create an oxygen debt. Extra oxygen is breathed in after exercise to pay back the oxygen debt.

Explain **two** ways in which the mammalian body uses this **extra** oxygen.
