

1(a)(i)	A amino / amine group ; B carboxyl (group) ; A carboxylic acid	2
1(a)(ii)	peptide bond joining nitrogen from amine group to carbon of carboxyl group on adjacent amino acid ; C = O and N – H shown correctly in the dipeptide ; formation of water molecule ;	3
1(b)(i)	label line to any area of the nucleus ;	1
1(b)(ii)	correct formula ; e.g. actual diameter = image length / magnification 15 (µm) ;	2
1(b)(iii)	<i>any one valid suggestion ;</i> e.g. <i>idea of</i> only very thin section of cell mitochondria found in other sections	1
1(c)	<i>two from</i> <i>idea that</i> reduces resistance to flow through sieve tube ; <i>idea that</i> less space taken up so increased volume of sap / AW, can pass through (per unit time) ; pressure flow / mass flow, does not need energy from the cell / AW; AVP ; (organelles not needed as) metabolic reactions / AW, carried out by the companion cell ;	2
