

Question number	Answer	Additional guidance	Mark
6(a)(i)	C Schwann cell		Computer (1)

Question number	Answer	Additional guidance	Mark
6(a)(ii)	A faster at nodes of Ranvier		Computer (1)

Question number	Answer	Additional guidance	Mark
6(b)	An answer that includes four of the following points: • active transport by sodium potassium (ion) pump (1) • of sodium ions out of the axon and potassium ions into the axon (1) • (passive) diffusion of potassium ions out of the axon (1) • so that inside of the membrane is negatively charged (compared with outside) (1) • so that the membrane voltage stays at the same value (1)	ALLOW passive diffusion described ALLOW axon for membrane ALLOW converse ALLOW maintains potential difference	Expert (4)

Question number	Answer	Additional guidance	Mark
6(c)	An answer that includes three of the following points: • binds to (voltage dependent) sodium ion channels (1) • blocking the (rapid) diffusion of sodium ions into the axon (1) • reducing depolarisation (of the membrane) (1) • below the threshold to trigger an action potential (1)	ALLOW blocks / inhibits IGNORE no depolarisation	Expert (3)
