

- 12** Which statement about the Michaelis–Menten constant (K_m) is correct for an enzyme with a low affinity for its substrate?
- A** It has a high K_m and reaches V_{max} at a high substrate concentration.
 - B** It has a high K_m and reaches V_{max} at a low substrate concentration.
 - C** It has a low K_m and reaches V_{max} at a high substrate concentration.
 - D** It has a low K_m and reaches V_{max} at a low substrate concentration.
