

- 20** The protein p53 is produced in a cell in response to DNA damage. This protein stops the cell cycle for a short time just before the DNA is replicated, so that the DNA can be repaired.

At which phase of the cell cycle will this stop occur?

- A** M                      **B** G<sub>1</sub>                      **C** S                      **D** G<sub>2</sub>
