

0 1 . 1

A student used chromatography to separate the different photosynthetic pigments in a chlorophyll solution. She had the following materials.

Chromatography paper  
A ruler and pencil  
Suitable glassware  
A solvent (solvent **A**)  
2 cm<sup>3</sup> of the chlorophyll solution

Describe how she could use these materials to separate the photosynthetic pigments by chromatography.

0 1 . 2

Using solvent **A**, the student separated five pigments. She then repeated her method using a different solvent, **B**. Using solvent **B**, she separated six pigments.

Explain the difference between these results.
