

- 36** The graph shows oxygen dissociation curves of adult oxyhaemoglobin in different carbon dioxide concentrations, 1 and 2.

Which conditions could change the shape of curve 1 to the shape of curve 2?

- A** high carbon dioxide concentration causing a decrease in pH
- B** high carbon dioxide concentration causing an increase in pH
- C** low carbon dioxide concentration causing a decrease in pH
- D** low carbon dioxide concentration causing an increase in pH
