

Question	Marking guidance	Mark	Comments
03.1	Diffusion	1	Automarker
03.2	Droplets increase surface areas (for lipase / enzyme action); (So) faster <u>hydrolysis</u> / digestion (of triglycerides / lipids); Micelles carry fatty acids and glycerol / monoglycerides to / through membrane / to (intestinal epithelial) cell;	3	- Context is important - Reject micelles increase surface area - Ignore 'breakdown' - Ignore 'small enough' - Accept description of membrane - Reject any movement through membrane proteins
03.3	<u>Golgi</u> (apparatus); - Modifies / processes <u>triglycerides</u>; - Combines triglycerides with proteins; - Packaged for release / exocytosis OR Forms vesicles;	4	- Ignore 'processes and packages' unqualified - Reject synthesises triglycerides - Accept 'forms / are lipoproteins'
