

Question number	Answer	Additional guidance	Mark
2(a)	An answer that includes the following points: • number of minutes in one day calculated (1) • volume in 24 hours given in standard form (1) OR • volume in one hour calculated (1) • volume in 24 hours given in standard form (1)	$1 \times 60 \times 24 = 1440$ 7.2×10^3 (litres) $5 \times 60 = 300$ 7.2×10^3 (litres) Correct answer with no working (2) Correct answer not in standard form = 1 mark	(2)

Question number	Answer	Additional guidance	Mark
2(b)	An answer that includes one similarity and one difference: Similarities: • both have walls containing {muscle cells / elastic fibres / an endothelial cell lining / an (outer) collagen layer} (1) • both have a valve (at the point they leave the heart) (1) Differences: • aorta has a {lumen with a wider diameter / thicker wall / more elastic tissue / more muscle tissue / more collagen} (1) • aorta has branches to more organs (1)		(2)

Question number	Answer	Additional guidance	Mark
2(c)	An answer that includes three of the following points: • addition to diagram {additional one or two layers of wall / valves}. If valves, must be correct orientation (1) Any two from: • {endothelial cell / tunica intima} lining labelled (1) • valve labelled (1) • {(smooth) muscle / elastic fibres / tunica media} labelled (1) • lumen labelled (1)	 The top diagram is a cross-section of a blood vessel. It shows a central lumen, an inner lining (endothelium), and an outer layer. Handwritten labels point to 'elastic fibre' at the top, 'Lumen' in the center, 'outer layer' on the right, 'Valves' in the middle, 'Endothelium' on the left, and 'collagen' at the bottom. The bottom diagram is a longitudinal section of a blood vessel. It shows a central lumen, a layer of endothelial cells, and a valve. Handwritten labels point to 'endothelial cells' on the left, 'lumen' in the center, and 'valve' on the right.	(3)
