

- 7 A solution of amylase was added to a suspension of starch. After 30 seconds, three samples of the mixture were tested with iodine solution, Benedict's solution or with biuret reagent.

Which are the expected results?

|          | colour with test reagent |                     |                |
|----------|--------------------------|---------------------|----------------|
|          | iodine solution          | Benedict's solution | biuret reagent |
| <b>A</b> | black                    | green               | purple         |
| <b>B</b> | black                    | red                 | blue           |
| <b>C</b> | brown                    | blue                | purple         |
| <b>D</b> | brown                    | yellow              | blue           |
