

2(a)	chlorophyll <i>a</i> / chlorophyll <i>b</i> / (β) carotene ;	1
2(b)	any two from: 1 action (spectrum) shows <u>rate</u> of photosynthesis for light, wavelengths / colours ; 2 absorption (spectrum) shows how much each, wavelength / colour, is absorbed ; 3 higher absorption gives higher photosynthesis ;	2
2(c)	any three from: 1 ref. (named) <u>enzymes</u> ; 2 high(er) temperature increases rate ; 3 (temperature affects) photophosphorylation / light-dependent / Calvin cycle / light-independent / ESC formation ; ora 4 enzymes denature at, too high a temperature / very high temperature / above optimum temperature ; 5 AVP ;	3
2(d)	any three from: 1 RuBP joins with CO₂ to make, 6C intermediate / GP ; 2 GP to TP ; 3 (GP → TP) uses ATP and reduced NADP ; 4 TP → glucose / hexose → starch ; 5 condensation / polymerisation / glycosidic bonds ;	3
