

27 Which evidence supports the cohesion-tension theory for the movement of water in flowering plants?

- 1 When the rate of transpiration of a tree is at its maximum, the diameter of the trunk is at its minimum.
- 2 When a plant shoot is removed close to the base of the stem, sap leaks out from the cut.
- 3 Evaporation of water from a porous pot can exert a force that draws water up a glass tube attached underneath the pot.
- 4 Droplets of water form at the edge of leaves of plants growing in conditions of soil with high water content and air with high humidity.

A 1 and 2

B 1 and 3

C 2 and 4

D 3 and 4
