

- 6 (a) Fig. 6.1 shows part of the Bowman's capsule of a kidney nephron.

Fig. 6.1

Name structures **A**, **B** and **C**.

- A**
- B**
- C** [3]

- (b) Fluid is forced into the Bowman's capsule by ultrafiltration to form the glomerular filtrate.

Describe the role of structure **B** in ultrafiltration.

- [2]

- (c) The main component of the glomerular filtrate formed in the Bowman's capsule is water. Most of this water is reabsorbed as the filtrate passes along the nephron.

- 180 dm^3 of water forms part of the glomerular filtrate each day.
- 1.4 dm^3 of water leaves the body in urine each day.

Calculate the percentage of water in the glomerular filtrate that is reabsorbed as the glomerular filtrate passes along the nephron.

Show your working and give your answer to **one** decimal place.

answer % [2]

- [7]

[Total: 14]
