

Question	Marking Guidance	Mark	Comments
10.1	Similarities 1. Polymers of nucleotides; 2. (Nucleotide has) pentose, (nitrogen-containing organic) base and a phosphate (group); 3. Cytosine, guanine and adenine (as bases); 4. Have phosphodiester bonds; Differences 5. Deoxyribose v ribose; 6. Thymine v uracil; 7. Long v short; 8. Double helix/stranded v single stranded;	6 max (6 x AO1)	1. Accept 'chain' for polymer 2. Accept in correct context 'ribose/deoxyribose' for pentose 7. Accept DNA longer 7. Ignore 'large' and 'small'

Question	Marking Guidance	Mark	Comments
10.2	Similarities 1. Double membrane; 2. Both contain (circular) DNA; 3. Both contain ribosomes; Differences 4. Thylakoids/lamellae/grana v cristae; 5. Stroma v matrix; 6. Pigments v no pigments; 7. Starch grains v no starch grains;	4 max (4 x AO1)	Max 3 marks for differences 3. Ignore numbers in front of ribosomes 6. Accept 'chlorophyll v no chlorophyll'
