

- 35** In some cases where a person has lung disease, the partial pressure of oxygen in the pulmonary veins is less than the partial pressure of oxygen in the alveoli.

What could explain the difference in partial pressure of oxygen?

- 1 A high proportion of alveoli are collapsed and do not have enough alveolar capillaries.
- 2 The partial pressure of oxygen in the pulmonary arteries is lower than in the alveolar air.
- 3 The rate of diffusion of oxygen from the alveolar air to the surrounding alveolar capillaries is too slow.

A 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only
