

- 68** A gene found on the X chromosome in humans has two alleles, dominant and recessive. Individuals who have only recessive alleles have a condition that affects their eyesight.

The inheritance of the condition in one family is shown in the family tree.

If one living skin cell from each member of this family were analysed, how many of the following alleles would be found?

	<i>number of copies of the recessive allele</i>	<i>number of copies of the dominant allele</i>
A	2	7
B	2	12
C	2	14
D	4	7
E	4	12
F	4	14
G	6	7
H	6	12
