

Question number	Answer	Additional guidance	Mark
6(a)	22.5 (cm ³)	ACCEPT 23.3 / 23.6 IGNORE any other units given	(1)

Question number	Answer	Additional guidance	Mark
6(b)(i)	An answer that includes the following points: • give squirrel access to all three types of nut (1) • a range of sizes used (1) • determine the {number / order} that the nuts are eaten (by the squirrel) (1)	. ACCEPT record which size they prefer / comparing measurements made before and after	(3)

Question number	Answer	Additional guidance	Mark
6(b)(ii)	An answer that includes the following points: - a reason based on size - a reason based on shell - a reason based on energy content	(1) e.g. more hazelnuts eaten (in the investigation) because they are smaller walnuts are too big to fit in the pouch (1) e.g. hazelnuts are easier to eat than walnuts because they have a hard covering and not a hard shell walnuts have a hard shell but squirrels have sharp teeth (1) e.g. walnuts provide a lot of energy so squirrels get enough energy for hibernation more acorns have to be eaten as they store less energy NB if a comparison is made between the nuts using the three sets of information, award 1 mark if no other marks awarded	(3)

Question number	Answer	Additional guidance	Mark
6(c)	An answer that includes three of the following points: - variation is size of pouches / polygenic (1) - squirrels with larger pouches could {gather / store} more food (1) - squirrels with (largest) pouches survived and reproduced (1) - increasing (large) food pouch allele frequency (1)	ACCEPT mutation in {DNA / gene} resulting in pouches ACCEPT squirrels with pouches can store food (compared to those without pouches) ACCEPT passed the (large) food pouch alleles onto their offspring DO NOT ACCEPT gene for allele	(3)
