

22 Which statement about the transcription and translation of a gene is correct?

- A** The non-transcribed strand of DNA has a base sequence that is identical to the mRNA produced in transcription.
- B** The template strand of DNA has a base sequence that is identical to the mRNA produced in transcription.
- C** The non-transcribed strand of DNA has a base sequence that is complementary to the tRNA molecules required in translation.
- D** The template strand of DNA has a base sequence that is complementary to the tRNA molecules required in translation.
