

- 29** A student makes an accurate labelled plan diagram of a section of a leaf containing a vascular bundle.

Which statement correctly describes part of their plan diagram?

- A** The vascular bundle has labels for the xylem vessel elements, phloem sieve tube elements and companion cells.
- B** The vascular bundle is divided into two sections, with the section closer to the upper epidermis labelled as xylem and the other section labelled as phloem.
- C** In the section of the vascular bundle positioned closer to the lower epidermis, each sieve tube element has an associated companion cell.
- D** The phloem sieve tube elements are drawn with thick cell walls to represent the lignin in the walls.
