

- 22** The mitotic index is a measure of the proportion of cells that are undergoing mitosis in an area of tissue. It is calculated using the formula shown.

$$\text{mitotic index} = (\text{number of cells undergoing mitosis} \div \text{total number of cells}) \times 100$$

A scientist calculated the mitotic index of areas of onion root at different distances from the tip of the root.

The results are shown.

Which statement is correct?

- A** No cell division occurs further than 1.4 mm from the tip of the root.
- B** The rate of cell division decreases as the distance from the root tip decreases.
- C** Most of the cells undergoing cell division are closer to the tip of the root.
- D** For a sample of 200 cells 0.2 mm from the tip of the root, 6 would be undergoing mitosis.
