

2 Photosynthesis is an important energy transfer process.

(a) Name **one** chloroplast pigment.

.....
..... [1]

(b) Explain the relationship between the **absorption** spectrum of the main chloroplast pigments in a species of plant and the **action** spectrum for photosynthesis for that species.

.....
.....
.....
.....
.....
..... [2]

(c) Explain why temperature can be a limiting factor of photosynthesis.

.....
.....
.....
.....
.....
..... [3]

(d) Outline how the light-independent stage of photosynthesis leads to the production of carbohydrates such as starch in plant leaves.

.....
.....
.....
.....
.....
..... [3]
