

2(a)	mucous gland cells / mucous gland(s) ; I mucosa goblet cell(s) ; <i>list containing trachea and / or bronchus and / or bronchioles I and allow to two max BUT if alveoli stated or incorrect cell types (e.g. ciliated cells) max 1</i>	2								
2(b)	<i>any one from:</i> Golgi (body / complex / apparatus) ; rough endoplasmic reticulum ; A rough ER / RER R SER I ER	1								
2(c)	<i>two marks to complete table</i> <table border="1"><tr><td>first process</td><td>transcription</td></tr><tr><td>second process</td><td>translation</td></tr><tr><td>third process</td><td>glycosylation</td></tr><tr><td>fourth process</td><td>exocytosis</td></tr></table> <i>allow one mark if transcription first process and exocytosis last process but other two wrong way round allow one mark if transcription and translation wrong way round and other two correct</i>	first process	transcription	second process	translation	third process	glycosylation	fourth process	exocytosis	2
first process	transcription									
second process	translation									
third process	glycosylation									
fourth process	exocytosis									
2(d)	<i>accept symbol Ψ for water potential three from:</i> 1 chloride presence outside cell causes water potential (outside cells) to, decrease / become more negative / become lower or chloride leaving cell causes water potential (in cell) to increase / AW ; 2 <u>water potential gradient</u> , created / present (between inside and outside of cell) ; 3 water leaves cell by <u>osmosis</u> (to be taken up by mucin to form mucus) ; 4 from higher to lower water potential / AW ; R if term gradient included	3								

Question	Answer	Marks
2(e)	<i>any three from:</i> <i>to produce, new / daughter, cells...</i> 1 that are genetically identical ; 2 to replace, old / damaged / dead, cells ; A named cells 3 to repair (damaged / injured / diseased) tissue ; A named tissue <i>if mp 2 and 3 not gained, allow 1 mark for replacing damaged tissue</i> 4 <i>ref.to</i> function ; <i>in context</i> 5 AVP ; <i>idea of</i> increase in number of cells / growth, to accommodate increase in size of gas exchange system in growing infants / AW	3

Question	Answer	Marks
