

- 13** The number of substrate molecules one enzyme molecule can convert to product in a second is called the turnover number. This number is obtained when all conditions are optimum for the specific enzyme-catalysed reaction.

enzyme	turnover number /s ⁻¹
catalase	2 800 000
carbonic anhydrase	600 000
phosphatase	971
protease	100

How many times faster at converting substrate to product is catalase compared to phosphatase?

- A** 29 **B** 288 **C** 2884 **D** 28836
