

Question	Marking Guidance	Mark	Comments
03.1	Everything other than the COOH inside drawn box;	1 (AO1)	

Question	Marking Guidance	Mark	Comments
03.2	(Triglyceride) 1. 3 fatty acids rather than 2; 2. 3 ester bonds rather than 2; 3. No phosphate group;	2 max (2 x AO1)	1, 2 and 3 Accept converse 1. Accept 'only 2 fatty acids'

Question	Marking Guidance	Mark	Comments
03.3	1. Phospholipid both hydrophobic and hydrophilic OR Phospholipid polar OR Phosphate group is charged; 2. Triglycerides only hydrophobic OR Fatty acid/triglyceride is non-polar; 3. Hydrophilic/phosphate group attracts water (to either side of bilayer);	3 (3 x AO1)	2. Accept 'Triglycerides not hydrophilic' 3. Accept 'faces water' for 'attracts water' 3. Ignore 'fatty acids repel water'

Question	Marking Guidance	Mark	Comments
03.4	1. Fatty acid A is saturated OR Fatty acid B is unsaturated; 2. (At 4 months) less fatty acid A and more fatty acid B OR Fish oil has more fatty acid B than fatty acid A; 3. Increase in fluidity caused by increased unsaturated fatty acids OR Increase in fluidity caused by increased fatty acid B (from the fish oil); 4. Double bonds/unsaturated fatty acids cause bends/kinks in fatty acid tail OR (Membrane more fluid because) phospholipids further apart;	3 max (2 x AO2, 1 x AO3)	1.and 2. Accept identification of A (as saturated) or B (as unsaturated) using numbers from table 1
