

- 1 (a) Figure 1.1 is a diagram of a neuromuscular junction.

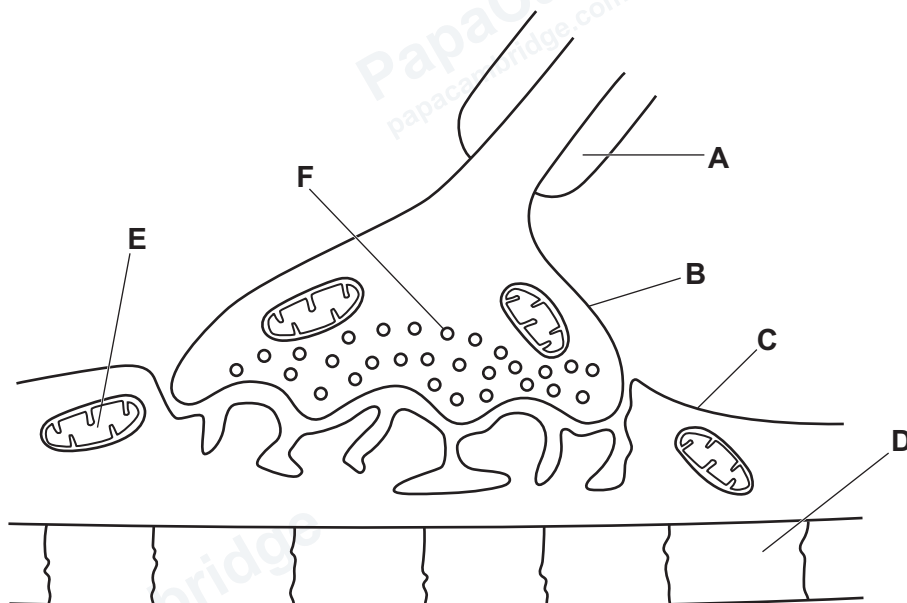

Figure 1.1

Use the letters **A–F** in Figure 1.1 to identify a structure:

- that contains a neurotransmitter
- where the Krebs cycle occurs
- that depolarises when a neurotransmitter binds to its receptors
- that contains troponin.

[4]

- (b) In mammals, control and coordination is provided by the nervous system and the endocrine system.

One role of the endocrine system is to allow the body to exercise for an extended time, such as running continuously for an hour.

Explain the importance of the endocrine system when a mammal runs continuously for an hour.
