

6(a)(i)	<i>any two from:</i> correct ref. to time ; correct ref. to volume of oxygen ; A gas for oxygen A volume of water displaced by oxygen A measuring height of water level (decreasing) A cm³ instead of volume AVP ; subtract volume of gas displaced by H₂O₂ addition	2
6(a)(ii)	<i>any two from:</i> greater surface area (over which catalase released) ; greater number of cells, damaged / cut open, to release catalase ; higher concentration of, catalase / enzyme ; A more, catalase / enzyme A more active sites available <i>must be linked to idea of more enzyme (i.e. must get mp 2 or 3)</i> so, higher rate of reaction / more enzyme-substrate complexes / more oxygen released ; AW	2
6(b)	increase to optimum and steeper decrease ; A if curve does not touch one or both axes	1
