

29 What is correct about the uptake and transport of water in plants?

- 1 Water transported by the symplast pathway enters root hair cells down a water potential gradient.
- 2 Water is transported in xylem by the symplast and apoplast pathways to reach the leaves.
- 3 Water transported by the apoplast pathway through plasmodesmata must pass through cell surface membranes of endodermal cells.

A 1 and 3

B 1 only

C 2 and 3

D 3 only
