

3(a)	<i>any four from:</i> <i>accept ora</i> 1 pyruvate converted to, acetyl group / 2C group / acetyl CoA (in link reaction) ; 2 NAD needed (in link reaction) ; 3 (where) NAD becomes reduced ; 4 reduced NAD goes to ETC ; 5 ETC / oxidative phosphorylation, works if oxygen is present or oxygen is the final electron acceptor ; 6 (so) reduced NAD is oxidised / NAD is regenerated ;	4
3(b)	<i>any five from:</i> 1 <u>glycolysis</u> ; 2 phosphorylation of glucose ; 3 splitting of fructose (1,6) bi(s)phosphate / AW ; 4 (into) two, triose phosphate / TP ; 5 (TP) oxidised / dehydrogenated, to pyruvate ; 6 net 2 ATP / 4 ATP, produced ; 7 (2) reduced NAD produced ;	5
